

Basic Description of Models

Background

Data are collected from FlowCam images of

Approach 1:

Non-hierarchical Case

Hierarchical Case

Approach 2: Mixed Model

If we acknowledge that our estimates of $y_{g,i}$ described previously are really a derived estimate of counts and a biomass-conversion calculation. In many cases,

So we can really describe $y_{g,i} = n_{g,i} \times b_{g,i}$
